

PENETRATION TESTING FOR BEAGLE

The Customer

Discover Beagle is a company transforming the future of document review with generative AI, focusing on minimising risk and maximising outcomes in eDiscovery review. The company's CTO sought Transputec's services for their cybersecurity needs.

The Challenges

Discover Beagle required a comprehensive penetration test to uncover internal and external risks across their network, web applications, and APIs. The goal was to identify vulnerabilities and receive actionable solutions to strengthen their overall security posture.

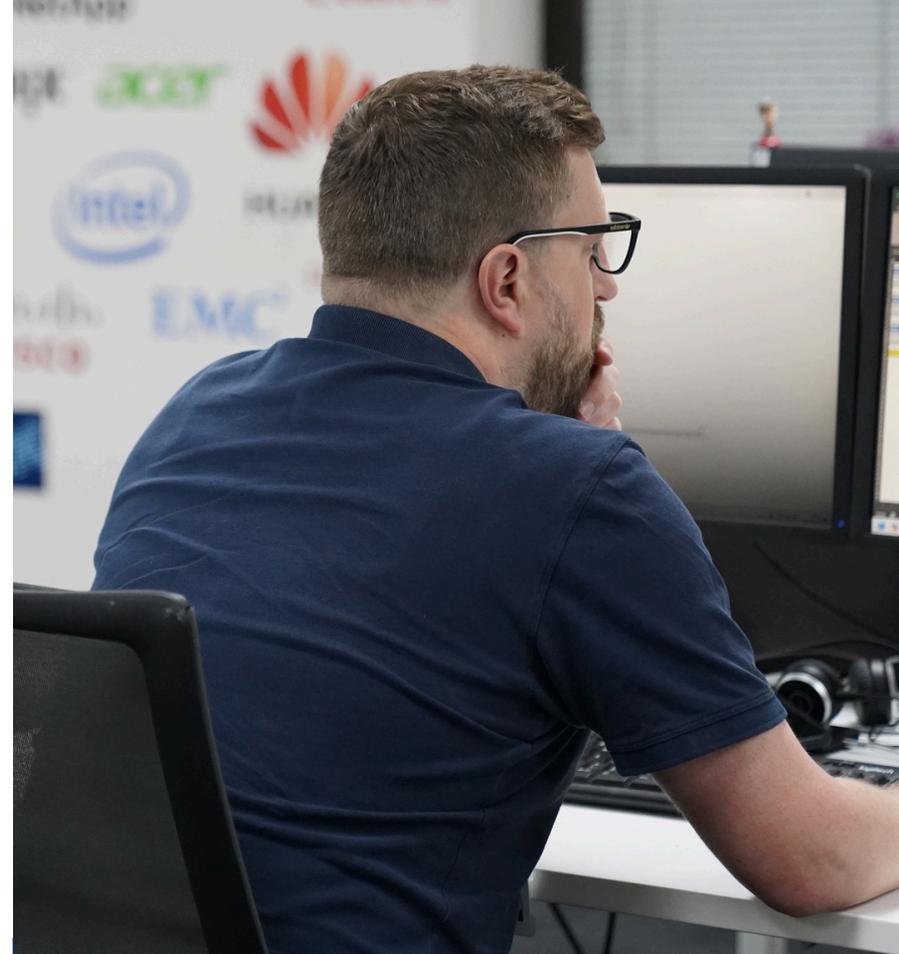

Our Approach

Transputec assigned a dedicated employee to conduct the penetration test. The scope of work included comprehensive network, web, and API penetration testing to identify internal and

external risks. The team prepared a detailed vulnerability report developed proof-of-concept exploits, and created a remediation roadmap with prioritised solutions. They maintained transparent communication throughout the project, primarily via virtual meetings and email, promptly addressing the client's questions and needs to ensure the final deliverables met requirements.

The Outcome

The engagement resulted in a concise, actionable report detailing all discovered vulnerabilities and their potential impact. Each finding was paired with prioritised remediation suggestions, enabling swift risk reduction and a clear roadmap for strengthening the overall security posture. The client was particularly impressed with the report's clarity and accessibility, noting that even someone with minimal security expertise could easily understand and follow the findings. While there were minor delays in some tasks, the overall quality of work and clear communication led to high client satisfaction rating.

“ We had a great experience working with Transputec for our web app's penetration testing. Their team was professional, easy to communicate with, and provided clear, actionable recommendations to improve our security. The whole process was smooth, and we'd definitely recommend them to anyone looking for a solid cybersecurity partner. ”

Maksim Ivanov
CTO - Discover Beagle
