

# Migration Service

## Windows 11 Upgrade

### with Intune

## What is it?

A comprehensive Windows 11 migration service designed to help organisations transition from Windows 10 before its official end-of-life (EOL) on October 14, 2025. Delivered by Transputec, this solution leverages Microsoft Intune and Windows Autopilot to provide a secure, efficient, and minimally disruptive upgrade path.

### The service includes:

- Assessing Hardware: for compatibility with Windows 11.
- Autopilot provisioning for new devices with Entra ID integration.
- In-place upgrades for compatible existing devices using Intune Feature Update policies.
- Solution design that can be tailored to suit your existing infrastructure.
- Licensing optimisation to assist you in choosing the most appropriate and efficient licensing model.
- Comprehensive testing, pilot programs, and phased rollouts to ensure smooth transitions.

### Get started today!

- or just give us a call on: +44 (0) 20 8584 1400.

## Why you need it?

Support for Windows 10 is ending soon. Continuing to use it after support stops can put your business at serious risk. Without regular updates, your systems become more open to security threats like viruses and cyber-attacks.

### Upgrading to Windows 11 now helps you avoid these problems.

#### → Security & Compliance:

- Protects your systems from threats after Windows 10 support ends which will help you to stay compliant with regulations.

#### → Operational Continuity:

- Keeps your business running smoothly with flexible, user-friendly upgrades.
- Allows old and new profiles to work side by side, reducing disruption.
- Structured deployment and early-life support ensure a stable transition.

#### → Expertise & Efficiency:

- Delivered by Microsoft-certified experts using trusted methods.
- Makes use of your current Intune setup to save time and reduce complexity.

#### → Scalability & Flexibility:

- Works for businesses of all sizes and industries.
- Offers add-ons like recommended training, data migration and hardware planning.

## Why us?

We ensure a smooth, secure Windows 11 upgrade with expert support, as little as possible disruption, and compliance-focused, scalable solutions for businesses.

## Why you need us?

#### → Expertise:

Microsoft-certified professionals ensure a smooth upgrade.

#### → Security & Compliance:

Helps protect against cyber threats and ensures your business stays compliant.

#### → Minimal Business Disruption:

Upgrades carefully for a planned deployment program.

#### → Tailored Solutions:

Customised based on your business needs, offering flexibility, and scalability.

#### → Fast and Efficient Deployment:

Reuses existing tools like Intune to speed up deployment, saving time and reducing costs.

## Summary

Transputec delivers a customised Windows 11 upgrade plan tailored to your organisation's environment, hardware lifecycle, and internal team capacity. Our expert-led approach ensures a smooth, secure deployment with minimal disruption, supporting business continuity while aligning with your long-term IT strategy and operational goals for maximum efficiency and performance.

## Our available service

At Transputec, we don't just upgrade, we build a tailored Windows 11 rollout program designed around your organisation's unique environment, hardware lifecycle, and internal team capacity. Our goal is to deliver a smooth, secure upgrade with minimal disruption to daily operations.

**We follow a proven 3-Step Delivery Framework to ensure every aspect of the transition is carefully planned and flawlessly executed:**

### → **Discovery & Assessment:**

We begin by fully understanding your IT landscape. This includes:

- Hardware audits to check if your current devices are Windows 11 ready.
- Application compatibility checks to ensure all business-critical software works post-upgrade via initial pilot acceptance testing.
- Business timeline alignment to ensure the upgrade supports, not hinders, your operational priorities.

### → **Custom Migration Platform and Solutions:**

We build a flexible, powerful Intune deployment engine tailored to your needs, whether you are currently:

- Using traditional Active Directory (AD) for device management
- Intune partially for some device management and wish to utilise fully
- SCCM
- Manual build of devices

Our solution includes:

- Dynamic resource mapping to allocate the right resources at the right time.
- Phased deployment policies to ensure a gradual, controlled rollout.
- Rollback and recovery plans for complete peace of mind if anything needs to be reversed.

### → **Flexibility Rollout Support:**

We work around your schedule, not the other way around. You decide how the rollout happens, with options such as:

- Department-by-department deployments.
- Overnight upgrades to minimise workday disruption.
- BYOD-continual access policy recommendations to manage vulnerable devices.
