

Company Information

Transputec Ltd is a limited company, registered in England under company number 03443568 at registered office of Transputec House, 19 Heather Park Drive, Wembley, HA0 1SS, UK.

Reporting period:

6 April 2025 – 5 April 2026

Reasons for Change in Emissions

Reported emissions have increased this year primarily because capital goods emissions have increased and product-related emissions continue to be calculated using a spend-based methodology. We are continuing to improve the quality of source data so that future reporting can move towards a more activity-based approach where the data is sufficiently reliable.

The Scope 1 categories have increased with the inclusion of AC units in the reporting.

The Scope 2 categories for which we have reported emissions have changed for the following reasons:

Improved measurement – improvements in measurement of data has allowed us to better report on emissions.

Electricity consumption – consumption has decreased.

The Scope 3 categories for which we have reported emissions have changed for the following reasons:

Purchased goods and services – Capital goods purchased has increased. Our approach at this time is still on a 'spend based' approach but we continue to look at ways with our partners at moving toward an 'activity based' approach for calculation.

Business travel – although there has been air-travel this is less than in previous years, hotel stays are also slightly fewer.

Employee commuting – The hybrid model of working continues resulting in more emissions from home working but less in general waste in the office. The % of time worked from home has been adjusted to align more to the business operation hence an increase in home working emissions calculations.

Waste recycling – with more effective measurement of recycled waste vs general waste these figures have changed dramatically

Overall reported emissions for 2025–2026 increased compared with 2024–2025, primarily due to higher reported capital goods emissions and the continued use of a spend-based methodology for IT hardware. This increase is partly offset by reductions in electricity consumption, business travel, waste generated in operations, employee commuting and homeworking emissions, and purchased goods and services.

Quantification and Reporting Methodology

We have continued to subscribe to Climate Essentials, a business initiative set up across various geographic locations to help organisations measure, manage and reduce CO2 emissions. We have measured emissions for the tax year periods 2021–2022, 2022–2023, 2023–2024, 2024–2025 and 2025–2026.

Organisation boundary

We have used the operational control approach.

Operational scopes

We have measured Scope 1, Scope 2 and relevant Scope 3 emissions. To our knowledge, no relevant emissions categories have been excluded from our measurements and management reporting.

Scope 1 In metric tonnes CO2e	2025- 2026	2024- 2025	2023-2024	2022-2023	Specific exclusions, % this represents for relevant scope (excluding geographic exclusions) & give an explanation	2021-2022
Diesel generator	0.00	0.00	0.00	0.00*	N/A	0.000
Corporate vehicles – owned	0.00	0.00	0.00	0.00	Excluded as all vehicles are electrically powered	0.000
Process emissions	N/A	N/A	N/A	N/A	N/A	N/A
Fugitive emissions - Fgas. Air conditioning systems use refrigerants, which can be released as fugitive emissions	0.2	0.00	0.00	0.00	N/A	0.132
Total scope 1	0.20	0.00	0.00	0.00*	N/A	0.132

*Figures corrected – because of misinterpretation in the reporting

Capital goods	4,567.173	2,810.558	2,936.142	4,061.882	None	6,206.677
Fuel and energy related activities	2.123	2.074	1.985*	2.339		3.416.4
Waste generated in operations. Activities included: process waste only	1.372	1.665	14.941*	11.731	None	6.636
Business Travel, including hotel stays and air travel	4.416	6.7	17.592*	14.402*		618,006
Employee Commuting/ homeworking	15.567	358.343	92.608	56.596		89,595
Events	0.00	0.00	0.00	0.026	None	0.000
Total scope 3	5,606.532	4,241.918	4,451.401*	5,216.77	None	7,603,419.40

Note: In the past year we have implemented a process to move from Spend based reporting to Activity based reporting on IT hardware. Whilst figures are available, the quality of data is not considered sufficiently reliable to report on for the past year, this will be reported on in the next financial year.

Base Year

We have a fixed base year of FY2021-2022. We chose this year as it was the first year for which we considered that we had reliable data, and it was typical in respect of our operations.

Targets

Our emissions reduction target is to reduce our gross, global scope 1 and 2 emissions in tonnes of CO2e by 50% from 2021-2022 baseline year by 2031. Our progress towards reaching this target has not been achieved this year and has gone up slightly compared to 2023-2024 but continues to improve upon the base year with combined emissions of 31.554tnCO2e in 2021-2022 to 20.473tnCO2e in 2025-2026 – a reduction of **35.12%**.

Intensity measurement

We have chosen an emissions intensity metric of tonnes of CO₂e per employee, as this is a relevant and proportionate business metric for our service-based organisation. Figures for the 2025–2026 period vs the 2024–2025 period are:

External Assurance Statement

Transputec is [ISO 14001:2015](#) certified via LRQA.

We joined Climate Essentials ([Climate Essentials - Climax Community](#)) to facilitate measurement and reduction planning of carbon emissions in early 2023.

In September 2023 we registered with [Science Based Targets Initiative](#).

Target	NA	Absolute	1+2	1.5°C	2022	2030	2023-09-28

Carbon Offsets

We have not purchased carbon credits to reduce our GHG emissions at this time but may consider this action as part of our net zero strategy.

Woodland Carbon Units

We have not purchased Woodland Carbon Units at this time but may consider this in the future.

Objectives and Targets

Our ongoing objectives are to continue to:

- Reduce paper and electricity consumption.
- Recycle waste product – plastic, can, paper, cardboard, glass and food waste
- Engage with waste disposal carriers and vendor's WEEE programs to dispose of IT waste product in as environmentally friendly way possible.

- Procurement of office supplies – purchase product that a) is made of recycled material and/or b) can be recycled (if not soiled) – where possible
- Continue to improve and look at ways to address environmental issues within the business.
- Engage with Customers and Suppliers to jointly look at ways to reduce impact upon the environment.

And our broader sustainability targets are to:

- Report on CO2 emissions each fiscal year
- Scope 1, 2 GHG emissions: Reduce 50% by FY2030-2031 compared to FY2021-2022 levels
- Scope 3, GHG emissions: work with upstream and downstream stakeholders
- Continue to address and improve environmental Issues within the business

Message from the Chairman

Transputec and its Board of Directors continue to support the business in taking practical and evidence-based steps to manage, measure and reduce carbon emissions. During the 2025–2026 reporting year, we have continued to improve the quality of our emissions data and have evidenced changes including the inclusion of air conditioning-related fugitive emissions, reduced electricity consumption, lower business travel emissions, improved measurement of recycled and general waste, and further progress towards moving IT hardware reporting from a spend-based to an activity-based methodology. We are also encouraged by the continued engagement of our customers and suppliers, with more organisations seeking clearer information on the carbon impact of the products and services they purchase. We will continue to work with our partners, suppliers and customers to improve the accuracy of emissions reporting and support the wider global initiative to address climate change.

Chairman:

27/07/20256
